Remote Login to ECC and Access Oracle DBMS

To login to Oracle in ECC, you must access the DBServer from the ECC network .

Step 1 – Remote Access to ECC

Follow the instructions given in the link below:

https://www.scu.edu/engineering/labs--research/labs/engineering-computing-center/remote-access-to-the-ecc/

ECC systems now use SCU credentials. When you log into an ECC Windows or Linux system, you enter your SCU username and your password is your SCU Gmail password. In the ECC, the best practice is to always enter your username in all lower case.

Step 2 – Accessing Oracle Server

Once you are logged into an ECC Workstation, you can initiate a DB connection to Oracle. To use Oracle, you must first have an Oracle account created for you.

Oracle accounts are created for you (as of this morning).

Attached below is a link to access the Oracle Helpme document.

https://docs.google.com/document/d/1-JbqfJMHOlRLD3OTA8ThXp9eicNp6bonMZVWulNAoFs/edit?usp=sharing

I am also attaching a pdf copy of the same document (OracleHelpme.pdf)

An important reminder:

When you change your oracle password, it cannot use the "@" symbol. You will lock out your account.
